12 MAY 1986

MEMORANDUM FOR: Acting Director of Information Technology

FROM: Henry P. Mahoney
                  Director of Logistics

SUBJECT: Barcode Development Facility - Request for
                  Priority Installation of IBM PC and Xerox 2700

1.   The Barcode Development Facility is intended to replicate
the Barcode System located at [_____]   The development
facility will be used to develop and test new software that will
satisfy new requirements in addition to being used to modify and
test existing software. The Barcode Development Facility will
also be used as a backup in the event of a system outage [_____]
[_____]

2.   The production Barcode System provides the Office of
Logistics (OL) with automated tracking of material through various
staging points [_____]   The Barcode System, as
implemented, utilizes state-of-the-art microcomputers and personal
computers to speed the process of updating the OL Inventory
Control System (ICS). This provides OL and the Agency with better
and more timely data on material being procured.

3.   While OL has just entered the field of barcode technology,
we have gained a real appreciation of this technology and require-
ments are now being developed to exploit further use of barcoding
[_____]

4.   In this light, we have purchased the necessary equipment
for the Barcode Development Facility and have it on site. We
therefore request your approval to expedite the installation of an
IBM XT370 PC linked to VM and a Xerox 2700 printer. (Reference
the attached Terminal Requests and memorandum from the Office of
Security). The line for the PC is already in place, ready to use,
and the Xerox 2700 line is available, but needs to be relocated.
Once we have the Barcode Development Facility operational, we can
begin working on current and future requirements without affecting
the production system. The Barcode Development Facility will also
provide us with back-up capabilities once it is installed.
